To whom it may concern,

It is a great honor for me to recommend Mr. Junyang Jiang for his application to your prestigious university. As an Associate Professor at the School of Pharmacy of Fudan University, I first got to know Mr. Jiang when I served as his research supervisor for the project in "*MMP-responsive nanocarriers for intelligent drug delivery in tumors*" in the summer of 2019 at Fudan University.

During the instruction and other communications, Mr. Jiang impressed me greatly. He is surely a diligent, curious, and creative student, showing fine scientific potential both in research strategy design and experimental operation. Having seen his commitment in the research including asking related questions frequently, thinking about innovations, and expressing competent scientific skills, I am convinced that he has an extraordinary interest in pharmaceuticals and biology.

This project in which he participated entitled "*MMP-responsive nanocarriers for intelligent drug delivery in tumors*" is an important part of a big undertaking. The synthesis process of two complex compounds requires a considerable amount of background information and proper technical protocols from the student. Moreover, this very experiment had never been performed by any other scientists before, so it was even more challenging for Mr. Jiang. However, despite such predicament, Mr. Jiang surprised me with his speed of comprehension. Whenever I brought up a new concept, he rapidly understood it and even added some of his own insight to illustrate some theories in a right way. I believe that with such rapid learning capability, Mr. Jiang will achieve a great deal in his future studies.

Furthermore, I found him to have a knack for catching details and conducting experiments with different methods. During the last step of synthesis, the amount of targeting product obtained was too low to be tested, so he tried to find other approaches for purification. With the precise observation and spirit of innovation, I believe that Mr. Jiang will contribute enormously to your community.

In view of his overall performance, Mr. Jiang is a piece of partially shining gold that, with the smelt of advanced education from world-renown universities like yours, would be capable of breakthrough discoveries in pharmacology and more. I would really appreciate it if you could give favorable consideration of candidacy to him, and it would be my pleasure to offer further assistance if you need to know more about Mr. Jiang.

Sincerely,

Dr. Prof. Tao Sun
